Now online!

Video with the REPEXPERT-specialists from Schäffler

Our latest project is now also online: A video for fast and bubble-free filling of thermal management systems in cooperation with the REPEXPERT specialists from SCHAEFFLER.

Coming Soon: The following videos are currently being edited and will be published soon:

- Special tools for leak testing of HV components
- Air conditioning leak test

Customizable with your logo!

Refractometer for coolant assessment

Even if you can hardly believe it with the current temperatures, the next winter is just around the corner. Therefore think in time about the procurement of refractometers for the evaluation of the coolant.

Made in Germany and customizable with your logo from 100 pieces.

You always wanted to have Leitenger products in your online store ?

Then now is the right time!

We provide you quickly and easily with all relevant data for the smooth integration of the products into your store. If you are interested, our Sales Manager Domestic Trade Mr. Martin Lohmüller and Sales Manager International Trade Mr. Michael Euchner, will be happy to answer your questions and provide you with further information. m.lohmuller@LR-germany.de , m.euchner@LR-germany.de

Cylinder pressure reducer for forming gas cylinders.

FDM 200/10

For introducing forming gas into cooling systems, brake systems and HV battery housings for leak testing. Suitable for: LDS 01_KS (leak detection system cooling system), LDS 01_BS (leak detection system brake system), LTBG XX (leak test battery housing various models).

Now available for booking.

High Voltage Training Practice and Level 3S for 2023

The dates for our popular high-voltage training courses Level 3S are now published on the homepage and can be booked.

New seminar offer.

From theory to workshop practice!

After all the certifications, this is finally exclusively about active further training in high-voltage vehicle technology for workshop practice. How does the thermal management of a high-voltage battery work? How does the entire high-voltage system work and which diagnostic options/maintenance measures are carried out and how?

Each participant will have the opportunity to carry out the practical exercises themselves and take away cross-brand experience!
